

BMC Control-M Managed Services

Automate Workflows with Confidence

Why BMC Control-M Managed Services Matter

BMC Control-M is widely recognised for its robust workload automation capabilities and centralised scheduling, mastering complex hybrid workloads with simplicity and dependability.

- Unified orchestration across hybrid environments, offering centralised control of workflows spanning mainframe, cloud, and distributed systems.
- Simplified management of batch workloads, with strong scheduling, dependency handling, workload balancing, and prevention of operational issues.
- Proven improvements in operational efficiency and time-to-market.
- Exceptional visibility and reliability, delivering SLAs, reducing failure rates, and accelerating deployment.

Our Control-M Managed Service Highlights

Reliable & Efficient Job Scheduling

Expert management of Control-M ensures orchestrated workflows run on time, with streamlined execution and reduced latency.

Resource Optimisation & Error Reduction

We finetune scheduling, dependencies, and balancing to reduce bottlenecks and manual errors.

Proactive Monitoring & Preventive Maintenance

Continuous oversight enables quick incident response, health checks, and issue escalation before disruptions occur.

Custom Configuration & Integration Support

Tailored setup of Control-M modules and flows, integrating with ERP, ETL, DevOps pipelines, cloud environments, and legacy systems.

Centralised Monitoring & Control

Maintain full visibility of cross-platform job workflows, dependencies, and execution health from a unified console.

Secure Authentication & Authorisation

Enforce access controls and protect job definitions and execution processes with robust policies.

Version Upgrades & Patch Management

Seamlessly manage Control-M updates, ensuring system stability and access to the latest features.

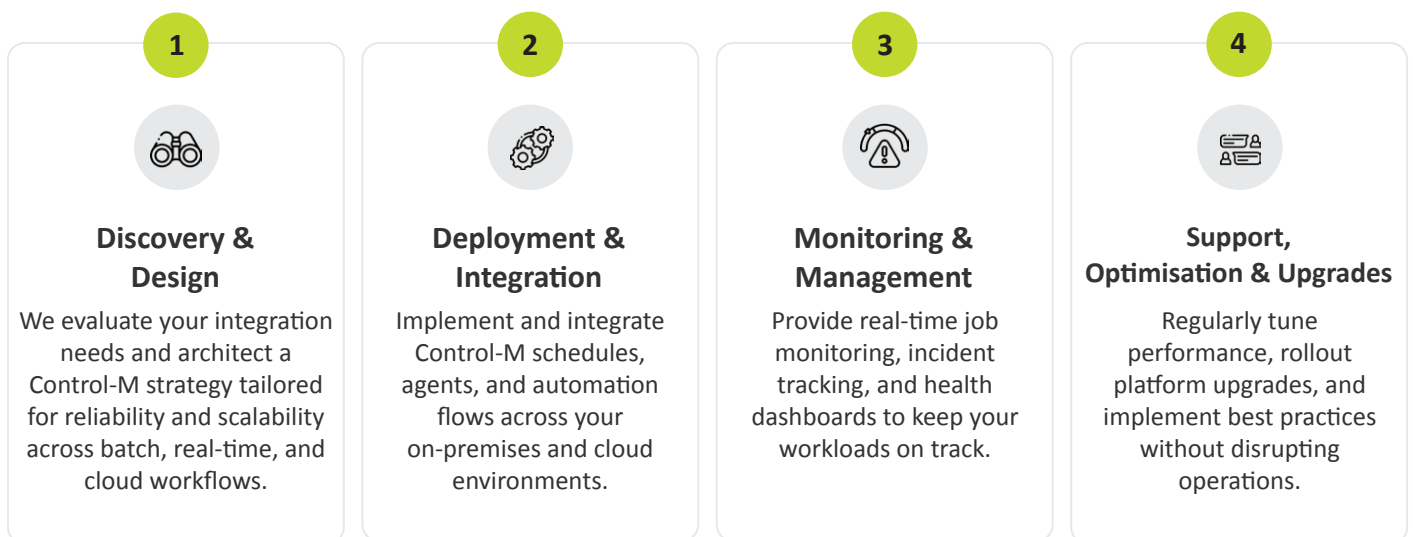

API-Driven Automation & Self-Service

Enhance agility through jobs-as-code, developer self-service, and orchestration APIs to integrate seamlessly with CI/CD pipelines.

Key Benefits for Your Organisation

Benefit	Your Advantage
Faster Workflow Delivery	Automate complex jobs efficiently; reduce delays and manual coordination.
Operational Visibility	Monitor and control workflows across platforms centrally and transparently.
Improved SLA Performance	Decrease failure rates and accelerate operations, maintaining service levels.
Enhanced Security & Governance	Secure orchestration pipelines with compliant access controls and auditing.
Greater Efficiency & Cost Savings	Lower administrative overhead with expert managed services and automation.
Licensing & Audit Support	Ensure compliance, control costs, simplify audits.
Scalable & Flexible Automation	Support growth seamlessly with hybrid and cloud-aware automation methods.

Our Four-Phase Service Approach

Customers we support

Ready to Automate with Assurance?

Let Cube Networks manage your Control-M environment, simplifying scheduling, fortifying reliability, and maximising efficiency.
