

IBM MQ - Managed Services

Message Queuing Made Easy

Expert IBM MQ support for dependable, secure, and compliant message queuing solutions.

Why Choose IBM MQ Managed Services?

Managed IBM MQ services go beyond basic monitoring, they offer resilience, scalability, and operational peace of mind.

High Availability & Disaster Recovery

Multi-instance queue managers, replicated data queue managers, MQ clusters, and cross-region replication ensure message and service uptime.

Fully Managed SaaS Alternatives

IBM's MQ SaaS handles upgrades, patches, and infrastructure operations, letting you concentrate on integration.

Hybrid & Containerised Deployment

IBM MQ runs across IBM Cloud, AWS, on-prem, appliances, Kubernetes, and IBM Cloud Pak, flexible for modern IT landscapes.

Advanced Security & Tooling

Token-based authentication (JWT), TLS 1.3, enhanced logging, and better console visualisations strengthen security.

Our IBM MQ Managed Service Highlights

High Availability & Resilient Architecture

Expert design of HA solutions, multi-instance, clusters, appliances or cross-region setups.

Proactive Monitoring & Issue Resolution

24/7 monitoring, real-time alerts, and rapid response to any queuing incidents.

Optimal Performance & Throughput

Ensure low latency and consistent message flow through fine-tuned configurations.

Version Upgrades & Patch Management

Keep pace with MQ enhancements including new REST APIs and Kafka connectors.

Key Benefits for Your Organisation

Discover the tangible value that our IBM MQ service brings to your business operations.

Benefit	Your Advantage
Reliable Message Delivery	Minimise risk and safeguard regulated data.
Enhanced Security & Compliance	Reduce manual effort, streamline operations.
Operational Efficiency & Lower Costs	Enable secure, reliable partner and internal connectivity.
Rapid Problem Resolution	Automate processes to ensure consistent execution.
Scalability & Agility	Scale your solution as demand increases.
Licensing & Audit Support	Ensure compliance, control costs, simplify audits.
Access to IBM MQ Expertise	Leverage deep knowledge of MQ architecture, optimisations, and best practice.

Our Four-Phase Service Approach

1

Discovery & Design

We assess your messaging needs and build a high-availability, secure MQ architecture tailored to your environment.

2

Deployment & Integration

Seamlessly deploy queue managers across cloud, on-prem, or containers, integrating MQ with your applications and infrastructure.

3

Monitoring & Management

We provide continuous system health checks, logging, and incident response to maintain service continuity.

4

Support, Optimisation & Upgrades

Stay ahead with version upgrades, performance tuning, and scheduler reviews, all managed without disruption.

Customers we support

Ready to Simplify IBM MQ?

Let Cube Networks take the complexity out of messaging middleware. From architecture through to optimisation, our managed IBM MQ service delivers reliability, security, and performance as standard.
