

# Middleware

Many enterprises heavily rely on middleware solutions to meet the growing demand for integrated data and automation across their IT landscapes. Regardless of the type of middleware solution, reliable operation is crucial for ensuring smooth and consistent application delivery across today's highly distributed platform architectures. This is achieved while also supporting software supply chain security, DevSecOps strategies, and automation, empowering teams to build new, better, and more secure apps faster.

Cube Networks offers a range of middleware-related services that can extend or alleviate the IT resources required by enterprises to implement, administer, monitor, and maintain this infrastructure across all its layers. Our Middleware Managed Services provide a comprehensive approach to middleware management, encompassing server infrastructure tasks, asset lifecycle management, patching, and upgrades—all streamlined through a single implementation. Leveraging our expertise, proven methodologies, and time-tested processes, we effectively tackle real-world middleware management challenges, contributing to a broader IT strategy.

## Capabilities Include:

-  Installation and Configuration
-  24x7x365 Monitoring and Logging
-  Performance Tuning
-  Security Management
-  Patch Management and Upgrades
-  Backup and Recovery
-  Automate
-  Documentation and Training

## Benefits of our service can be measured against any number of SLA's and/or deliverables including:

-  Improve Availability
-  Lower Administrative and Technical overheads
-  Improve Efficiency (Development lifecycle)
-  Lower costs
-  Ensure Security
-  Ensure Regulatory Compliance
-  Increase Standardisation and Governance
